Professional Summary

Analytics Engineer who cares about metrics being right and models being reusable, not just queries that run. I build tested, documented dimensional models that turn raw data into analytics-ready tables the business can trust, and I define the KPIs on top of them. I work across dbt, Snowflake, SQL, Python, and Airflow, and use AI tools to move faster.

Education

Alexandria University – Bachelor of Computers and Data Science June 2026
Relevant Coursework: Data Modeling, Data Warehousing, Data Engineering, Distributed Data Analytics, Cloud Solutions

Technical Skills

Analytics Engineering: dbt Core (Models, Tests, Macros, Seeds, Documentation, Lineage), ELT, Dimensional Modeling (Kimball), Star Schema, SCD Type 2, Surrogate Keys, Medallion Architecture, Data Quality Testing, KPI Definition

Warehouses and Languages: Snowflake, SQL Server, PostgreSQL, Azure Synapse Analytics, SQL (Joins, Window Functions, Views, Stored Procedures), T-SQL, Python (Pandas, PySpark)

Orchestration and Tools: Apache Airflow, Docker, Git, GitHub, Azure Data Factory, Apache Spark, Apache Kafka

BI and Analytics: Power BI, Tableau, Plotly Dash, Exploratory Data Analysis, Data Validation, AI-Assisted Development

Experience

Freelance Data Engineer – B2B Lead Generation Pipeline (Python, Selenium, Pandas, AI-assisted) 2024 – Present

- Replaced slow, inconsistent manual lead research for an export business by building an automated Google Maps pipeline that extracts 1,500+ import-company records per market across 5 countries (KSA, UAE, USA, Canada, Turkey)
- Cleaned, deduplicated, and normalized raw data with Pandas into structured CSV/Excel datasets (GitHub)

Projects

dbt and Snowflake ELT Pipeline (dbt Core, Snowflake, SQL, AI-assisted) GitHub

- Built an end-to-end ELT pipeline that loads raw data into Snowflake and transforms it with dbt through staging and mart layers into star schema tables for analytics
- Implemented dbt macros, seeds, and automated tests, with generated documentation and data lineage

Modern SQL Data Warehouse (SQL Server, T-SQL, Medallion Architecture, AI-assisted) GitHub

- Consolidated 6 CRM and ERP source tables through Bronze, Silver, and Gold layers with stored-procedure ETL, logging, and error handling; cleansed data with deduplication, standardization, and validation
- Modeled a Gold-layer star schema (conformed customer dimension, SCD Type 2 product dimension, sales fact with surrogate keys) and published reporting views for customer segmentation and product performance

Automated Dataflow Pipeline – Graduation Project (Airflow, Docker, PostgreSQL, AI-assisted) GitHub

- Built a weekly Airflow 2.9 (Docker) ETL pipeline loading a 5-table star schema into Supabase PostgreSQL with upserts, processing 10K+ records per run at 99.5% accuracy

NYC Airbnb Market Analysis and Power BI Dashboard (Python, Pandas, Power BI, AI-assisted) GitHub

- Validated and cleaned 48.9K listings (invalid prices removed, outliers flagged, 4 derived fields), defined KPIs, and delivered a 3-page Power BI dashboard on pricing, host activity, and idle inventory

Sales Data Analysis and Interactive Dashboard (Python, Power BI, AI-assisted) GitHub

- Validated 26K+ sales records through 13 documented data-quality checks, defined KPIs ($20M revenue, $9.9M profit, 50% margin), and delivered a Power BI dashboard with business insights

Certifications

Microsoft Data Engineer – Digital Egypt Pioneers Initiative (DEPI) 2024

- Hands-on training in Azure Data Factory, Synapse Analytics, and cloud data warehousing

Big Data Analysis Training Program – National Telecommunication Institute (NTI) 2025

- Hands-on training in Hadoop, Spark, Flink, Hive, HBase, HDFS, YARN, and real-time stream processing

IBM SkillsBuild Data Analytics Certificate – IBM Credly Badge

- Applied training in data preparation, descriptive and inferential statistics, and data visualization for storytelling
