Professional Summary

Data Analyst who cares about insights being right, not just good-looking; I turn raw, messy data into decisions people can act on. I clean and validate data, define the right KPIs, and build interactive dashboards with SQL, Python, Power BI, and Tableau, using AI tools to speed up analysis and documentation.

Education

Alexandria University – Bachelor of Computers and Data Science June 2026
Relevant Coursework: Data Modeling, Data Warehousing, Data Engineering, Distributed Data Analytics, Cloud Solutions

Technical Skills

Analytics: Data Cleaning and Validation, Exploratory Data Analysis (EDA), KPI Design and Reporting, Dashboard Development, Data Visualization, Data Storytelling, Business Insights, Statistical Analysis, Feature Engineering

BI and Visualization: Power BI, Tableau, Plotly Dash, Matplotlib, Seaborn

Languages and Databases: SQL (T-SQL, Joins, Aggregations, Window Functions), Python (Pandas, NumPy, scikit-learn), SQL Server, PostgreSQL, Git, AI-Assisted Development

Data Engineering: ETL/ELT, Data Modeling, Star Schema, Snowflake, dbt, Apache Airflow, PySpark, Web Scraping

Experience

Freelance Data Analyst – B2B Lead Generation (Python, Selenium, Pandas, AI-assisted) 2024 – Present

- Replaced slow, inconsistent manual lead research for an export business with an automated pipeline extracting 1,500+ import-company records per market across 5 countries (KSA, UAE, USA, Canada, Turkey)
- Cleaned, deduplicated, and normalized raw web data with Pandas into structured CSV/Excel datasets (GitHub)

Projects

NYC Airbnb Market Analysis and Power BI Dashboard (Python, Pandas, Power BI, AI-assisted) GitHub

- Cleaned and validated 48.9K Airbnb listings (removed 11 invalid prices, filled review gaps, flagged 239 extreme prices) and engineered features such as price tier and stay type
- Built a 3-page interactive Power BI dashboard with KPIs and slicers; found Manhattan and Brooklyn hold 85% of listings and 36% show zero availability, and recommended growing outer-borough supply

Sales Data Analysis and Interactive Dashboard (Python, Pandas, Power BI, AI-assisted) GitHub

- Validated and cleaned 26K+ sales records (2013–2016): re-calculated revenue, tax, and profit fields, flagged 34% walk-in customers and 2% loss-making sales, and engineered features (profit margin, order-size buckets, customer type)
- Designed KPIs ($20M revenue, $9.9M profit, 50% margin) in an interactive Power BI dashboard; found one category drives 58% of revenue and 24% of orders generate 50%, and recommended diversification and pricing changes

Employee Attrition and Compensation Analysis (Python, Power BI, AI-assisted) GitHub

- Analyzed 1,470 employee records with Python (Pandas, Seaborn) and built an interactive Power BI dashboard covering attrition, compensation, tenure, and performance by department and job role
- Identified 16.1% overall attrition and a 39.8% rate for Sales Representatives (2.5× the company average, lowest pay), and recommended early-career pay progression and retention actions to HR

Modern SQL Data Warehouse (SQL Server, T-SQL, AI-assisted) GitHub

- Built a SQL Server warehouse with Medallion Architecture (Bronze/Silver/Gold), T-SQL ETL, and a Gold-layer star schema consolidating 6 ERP and CRM source tables for analytical reporting

Certifications

IBM SkillsBuild Data Analytics Certificate – IBM Credly Badge

- Applied training in data preparation, descriptive and inferential statistics, and data visualization for storytelling

Microsoft Data Engineer – Digital Egypt Pioneers Initiative (DEPI) 2024

- Hands-on training in Azure Data Factory, Synapse Analytics, and cloud data warehousing

Big Data Analysis Training Program – National Telecommunication Institute (NTI) 2025

- Hands-on training in Hadoop, Spark, Flink, Hive, HBase, HDFS, YARN, and real-time stream processing
